

NeuroFlow AI

Earlier neurological insight from everyday movement and speech

AI-powered screening infrastructure for faster, more accessible neurological risk detection.

Raising €1.5M Seed

Berlin, Germany | July 2026 | Demo pitch deck

The problem

Neurological conditions are often detected too late.

Today's pathway is slow and fragmented

12+ months

Average delay between first symptoms and specialist assessment

High cost

Specialist screening is expensive and difficult to scale

Subjective signals

Early symptoms are subtle, intermittent, and easy to miss

Access gap

Rural and underserved patients face the longest delays

Why now

Smartphones, wearables, and modern AI models can measure speech, gait, tremor, and reaction patterns continuously - creating a scalable digital biomarker layer.

3B+

PEOPLE LIVING WITH NEUROLOGIC

30-50%

POTENTIALLY PREVENTABLE DIAGNOSTIC DEL

Illustrative market figures for demo use.

Our solution

A clinically oriented AI screening platform built for continuous, low-friction assessment.

1

Capture

2-minute guided speech and movement tasks

2

Analyze

Multimodal models detect clinically relevant pattern shifts

3

Explain

Clinicians receive interpretable risk indicators and trend history

4

Escalate

High-risk users are routed into validated care pathways

Product & workflow

Designed for patients, clinicians, and research partners.

Early traction

Pilot demand validates the workflow and commercial need.

8

PILOT CLINICS

2,400+

SCREENINGS COMPLETED

18%

MONTHLY GROWTH

62%

PILOT CONVERSION

Monthly assessments

What pilots say

“NeuroFlow helps us prioritize patients who need specialist attention, without adding another manual screening burden.”

HEAD OF NEUROLOGY

Berlin pilot clinic

Business model & market

Recurring SaaS revenue with a data-network advantage.

Commercial model

Clinics €1,200-€4,000 / month

Dashboard + assessment volume

Research €60k-€250k / study

Data collection + analytics API

Payers Per-member pricing

Population screening programs

Market opportunity

Team

Deep expertise across neuroscience, machine learning, and regulated healthcare.

Dr. Anna Keller

CEO & CO-FOUNDER

Former neuroscience researcher, Charité
Berlin

Lukas Weber

CTO & CO-FOUNDER

8 years in healthcare machine learning

Dr. Emilia Rossi

CLINICAL LEAD

Neurologist and digital biomarker researcher

The raise

€1.5M seed to reach clinical validation and repeatable commercial scale.

18-month milestones

Q4 2026

Complete multicenter validation study

Q1 2027

Launch paid clinic platform

Q2 2027

Reach 25 contracted clinics

Q3 2027

Submit regulated product pathway

Detect earlier. Act sooner.

NeuroFlow AI is building the screening layer for the next generation of neurological care.
